

Clinical Coding and Classifications Developments

Hazel Brear, Senior Clinical Classifications Manager ACC, HSCIC

www.chks.co.uk

Key Clinical Classifications Developments October 2015

....

presented by Hazel Brear, Senior Classifications Manager

HSCIC - Clinical Classifications

- Key developments
 - Whistle stop tour of business as usual
 - New developments
 - HSCIC UK World Health Organisation Family of Classifications (WHO-FIC) Collaborating Centre
 - HSCIC ICD-11 Field Trial Centre

ICD-10 5th Edition

- ICD-10 5th Edition
 - Training
 - Implementation guidance
 - Coding standards reference book
- ICD-10 Eversion
- Morphology codes

OPCS-4.8

• OPCS-4 Requests for Change:

- All requests received by 01-Oct-2015 will be considered for next release
- Approximately 50 new requests
- NHS implementation planned for 1st April 2017
- Consultation on proposed changes will be opened in summer 2016 (dates to be confirmed)

National cross-maps

- Link between SNOMED CT to the mandated version of the NHS Clinical Classifications ICD-10 and OPCS-4
- Updated bi-annually in line with Terminology release
- Supports Trusts using SNOMED CT in an Electronic Health Record
- Semi-automated mapping using a series of flags to apply UK classification standards, rules and conventions

UK WHO-FIC Collaborating Centre

- Mission of the WHO-FIC network
 - to improve health through the ongoing development, maintenance and promotion of an integrated suite of reference health classifications and related products that produce information of value and utility across the world
- UK WHO-FIC Collaborating Centre designated July 2014
 - Close collaboration with Office of National Statistics
 - Agreed work plan with WHO (morbidity and mortality)
 - Major commitment 2015 to host the annual network meeting in October 2015 in Manchester
 - Establishing governance with health administrations and NHS authorities of the four countries of the UK

World Health Organisation - ICD-11

- ICD-11 major update with significant benefits to UK healthcare
- Requires in depth consideration informed by field trials

What's different with ICD-11?

- Serves <u>multiple use-cases</u> e.g. Mortality, Morbidity, Primary Care, Quality and Safety or research
- Content and structure is <u>developed by an international network of</u> <u>scientists and specialists</u>
- Provides **textual definition** for all disease categories
- Enhanced coding possibilities
- Incorporates <u>new Chapters</u>
- <u>Content-model based</u> each code character & category has a consistent meaning
- <u>Ontology driven</u> has formal specification of diagnostic entities with corresponding attributes & value sets

What is a ICD-11 Field Trial Centre?

- An approved study centre to manage the implementation of field trials at country level
- Establishment of a country Field Trial Centre at HSCIC endorsed by Standardised Committee for Care Information to inform potential adoption

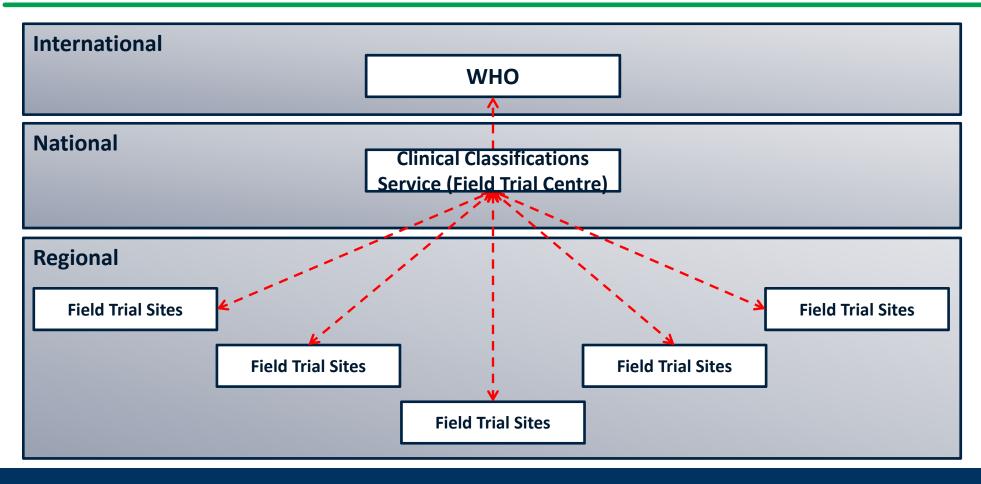

Purpose of Field Trials

- Test "fitness of ICD-11 for multiple purposes" (mortality coding, morbidity coding, etc.)
- Assess the stability and comparability between ICD-10 and ICD-11
- Ascertain the added value of ICD-11 when compared with ICD-10 or earlier versions

Focus of the Field Trials

- Feasibility (Applicability)
 - Is ICD-11 easy to use?
 - Does it apply in different global contexts?
- Reliability (Consistency)
 - Do different users get the same results?
 - Do users assign the same codes?
 - What are the sources of any discrepancies?
- Utility (Benefits)
 - Does ICD-11 provide better information to guide diagnosis coding?
 - Does it enhance data capture?
 - Does it improve documentation, aggregation, comparison, reporting?

How will the Field Trials be run?

What will the staffing implications be?

- FTSs will be responsible for carrying out the studies so will require people to undertake the following roles:
 - FTS Coordinator
 - Raters (e.g. clinicians, clinical coders/health information managers)
 - Volunteers for live or video case assessment
 - Key Informants (individuals with ICD expertise)
 - Administration and data entry staff
- Detailed role specifications and detailed study specifications will be made available once we have developed the schedule and begun the process to identify Field Trial Sites

What happens next?

- Currently working with WHO to develop a field trial schedule by end of 2015/16 in line with WHO timelines
- Invitations for expressions of interest in becoming a Field Trial Site (FTS) during 2016/17 e.g. NHS and other organisations
- FTSs will be confirmed and additional studies agreed
- HSCIC (as the Field Trial Centre) will then work with FTSs to provide training and support
- Once everything is in place, we would expect the field trials to commence during 2016/17
