

CHKS live – Release Document

Release date: 28/05/2020

New Features

- Two additional chart options have been added: Dual Y axis time series and Stacked time series

- Global cluster for Ethnicity 'show by' added.
- HSMR prediction added to drill down
- Comparison Period: numerator and denominator column options added to scorecard
- ECDS Module - Duration to departure (minutes) added as an available axis 'show by' for Cross Tabs.

New Indicators

New indicators have been added for deaths; spells; bed days, mortality per spell; and mortality per bed day for the following:

- All activity
- With Covid-19
- With Suspected Covid-19
- Without Confirmed or Suspected Covid-19

For commissioner clients only

New indicators have been added for deaths per 1000 population and bed days per 1000 population for the same breakdowns listed above.

Maintenance tasks

OPCS49 update reviewed and revisions made to the following areas:

- Procedure look up tables
- Critical Mass module
- British Association of Day Surgery Module (included in previous release)
- Complications attributed indicator
- Data quality flags

Bug fixes

- Issues with automated reports: Time period selection and peer distribution display errors fixed
- Outpatient attendances with a procedure (three indicators) – orientation corrected to 'High is good'
- Time period selection screen – data availability. The error affecting this display has been resolved.
- CLIP: Elective IP - no procedure definition corrected (note: code was correct)
- CLIP - Risk indicator titles corrected to refer to 2018

The next planned release is scheduled for Q3 2020.
